

Spaceborne, Real-time, Multi-parameter Synoptical Monitoring of Erupting Volcanoes at Continental Scale: Concepts and Demonstration

Fabrizio Ferrucci (IPG Paris)

- ~ 1,500 volcanoes erupted in the last 12,000 yr (Holocene)
- ~ 700 volcanoes erupted at least once in historical times
- > 600 have no permanent monitoring or no monitoring at all

The current EVOSS playground

From: Global Volcanism Program http://volcano.si.edu/world/find_regions.cfm

ICAO (International Civil Aviation Organization) Volcanic Ash Contingency Plan :

-ALERTING PHASE "The initial response commences when a volcanic eruption is expected...."

Action: a **"Danger Area"** is declared by NOTAM around the volcanic source

-REACTIVE PHASE "The Reactive Phase commences at the outbreak of the volcanic eruption and release of volcanic ash ..." Action: a **"Start of Eruption SIGMET"** notice is released

These concepts are the backbone of

European **V**olcano **O**bservatory **S**pace **S**ervices

*A worldwide, spaceborne monitoring service for real-time,
Volcano Crisis Management and support to Volcanic Ash avoidance*

High-Temperature
volcanic features

recognition

SO₂ concentrations and mass rate

European Volcano Observatory Space Services

GMES-Space Grant Agreement no. 242535 (2010–2013)

Based on IR / UV satellite payloads SEVIRI, MODIS, IASI, OMI, GOME-2

- ✓ Real-time (15 minutes + twice daily), detection, location and quantitative evaluation of **Thermal Anomalies associated to Magma at surface** at **any volcano** in the current area of operation (**High-Temperature Anomaly Service**)
- ✓ Real time (15 minutes) detection, location, mapping and quantitative monitoring of **Volcanic Ash plumes** (**Volcanic Ash Service**), in co-operation with EUMETSAT
- ✓ Near-Realtime (> 3 times daily) detection, mapping and quantitative evaluation of **Anomalous SO₂ concentrations** at and around **any volcano** in the current area of operation (**SO₂ Service**)

Based on SAR satellite payloads COSMO-SkyMed and/or Radarsat, TerraSAR-X

- ✓ Delay-time **Volcanic Pattern change detection and Volume Change estimate** by spaceborne SAR observation (**Ground Deformation Service**)

GEPW-7

Barcelona 15-16 April 2013

• Nyamulagira (Congo) :	Eruption	January 2 to 29, 2010
• Soufriere Hills (Montserrat) :	Pyroclastic flow on	February 11, 2010
• Eyjafjallajökull (Iceland) :	Eruption	March 20, 2010
• Manda Hararo (Ethiopia) :	Eruption	March 21, 2010
• Piton de la Fournaise (Reunion) :	Eruption	October 14, 2010
•	Eruption on:	December 9, 2010
• Etna (Italy) :	Eruptions on:	January 12, 2011
•	«	April 9, May 11, 2011
• Grimsvötn (Iceland) :	Eruption	May 24, 2011

Thermal – tests and operation

• Nabro (Eritrea) :	Eruption	June 12 to July 17, 2011 (first tests)
• Nyiragongo (Congo) :	Lava lake - permanent	since June 2011 (SEVIRI operation tests)
• Erta Ale :	Lava lake - permanent	since June 2011 (MODIS operation tests)
• Etna (Italy) :	Eruptions on:	July 9–19–25–30, 2011
	«	August 5–12–20–29, 2011

Quantitative Thermal and SO₂ - online

• Etna (Italy) :	Eruptions on:	September 8–19–29, Oct. 8–23, 2011
• Nyamulagira (Congo) :	Eruption	November 6, 2011 to March 15, 2012
• Etna (Italy) :	Eruptions on:	November 15, 2011
	«	January 3, 2012
	«	February 6, 2012

+ Quantitative Ash Retrieval - online

• Etna (Italy) :	Eruptions on:	March 4–18 , 2012
	«	April 1–12–24, 2012
	«	February 2–19–20–21–22–28, 2013
	«	March 4, 16–17; April 3, 11–12, 2013
• Stromboli (Italy):	Eruption	July 6, 2012 and January 19, 2013
• Soufriere Hills (Montserrat) :	Unrest	from August 6, 2012

EOSS STATUS AND TIMELINE

Research :

Technical components **completed** in 2011 – Volcanological research continues on huge archives of thermal, gas, ash, ground deformation data

Success :

93% (41 eruption detected and monitored automatically and in real-time vs. 44 occurred in the Region of Interest – *Note*: two of the three missing were underwater; the third, a minor intra-crater event at Mt.Etna)

Improvements :

based on **new evidence** from research, or to exploit **new observation modes** (5-minute refresh by MSG's RSS on the northern half of the RoI, e.g.)

Demonstration :

From October 2011, during 17 months + 4 extra months
